CRAZY HILLS

FEEDING CHART

CRAZY GROWER TIPS

Foliar Feeding for Faster Absorption

Elan Foliar (1ml/L) - Provides an instant energy boost in veg / **Spark Foliar (1ml/L)** - Corrects Ca/Mg deficiencies and relieves plant stress quickly

pH Control for Maximum Nutrient Uptake

Veg: 5.8 - 6.2 / **Bloom:** 6.0 - 6.5

Monitor Plants Under LEDs – Adjust Feeding Accordingly

LED plants uptake more Ca/Mg - Increase Spark dosage if needed / **More intense light = higher nutrient demands** - Watch for signs of extra feeding needs.

Heavy Feeders Need More Nutrients – Know Your Strains

Some strains consume more nutrients than others - Increase feeding by 10-20% / **For more terpene & aroma boost -** Increase Elan & Spark

BUILD THE BEST FOUNDATION FOR YOUR GROW!

We recommend using our premium soil blend, **FOUNDATION Light Mix / For stronger roots:** Mix Kickoff at 10g per 10L of soil when transplanting for early microbial colonization and root protection.

	UPTHRIVE ml / L	ELAN ml / L	PROSPER ml / L	SPARK ml / L	KICKOFF g / L
VEG PHASE Weeks 1-4					
Week 1	1	1	-	0.5	1
Week 2	1	1	-	1	0.5
Week 3	1.5	1.5	-	1	0.5
Week 4	1.5	2	0.5	1.5	0.5
BLOOM PHASE Weeks 1-8					
Week 1	2	2.5	1	2	0.5
Week 2	2	2.5	2	2.5	0.5
Week 3	1.5	3	3	3	0.5
Week 4	1.5	3	3	3	0.5
Week 5	1	3.5	3	4	0.5
Week 6 *Peak PK Boost*	1*	4	4 + 2 for extra PK boost	4	0.5
Week 7 *Final Bulking*	1*	5	4 + 2 for extra PK boost	5	-
Week 8 *Ripening*	-	3	3	3	-
FLUSH PHASE					
Week 9	-	1-2*	-	1*	-
Week 10	-	1*	-	1*	-

**Optional / Für beste Ergebnisse*

VEG STAGE - Building Strong Foundations

- **Upthrive fuels early growth & microbes**
  Supports green, healthy plants and vigorous root development
- **Elan boosts plant energy & nutrient uptake**
  Strengthens plants, enhances stress resistance, and improves nutrient absorption
- **Kickoff strengthens the root zone**
  Explosive root growth, unlocking nutrients for faster and stronger plant development
- **Spark supplies essential micronutrients, Ca/Mg, and natural plant regulators**
  Ensures healthy growth and a smooth transition from veg to bloom

BLOOM STAGE - Bigger, Denser, Tastier Buds

- **Continue Upthrive in early bloom**
  Feeds microbes and enhances natural sugar production for improved flavors and aroma
- **Increase Prosper in Weeks 6-7**
  Extra PK for bigger, denser buds and maximum resin production
- **Boost Spark in flower**
  Improves bud formation, resin production, and overall flower density
- **Elan maximizes terpene production**
  Enhances aroma, flavor, and overall bud quality for premium, flavorful harvests

FLUSH OR NOT? Organic Growing & Terpene Retention

No synthetic salts = No need for a 2-week flush, or a flush at all • Feed Elan & Spark together in Week 9 & 10 to maximize nutrient absorption and enhance terpene profiles for smooth, flavorful buds • If flushing, Week 9 is the best time for a light flush to remove excess nutrients without stripping plant energy.
